

Cleo app

Martin Iliev

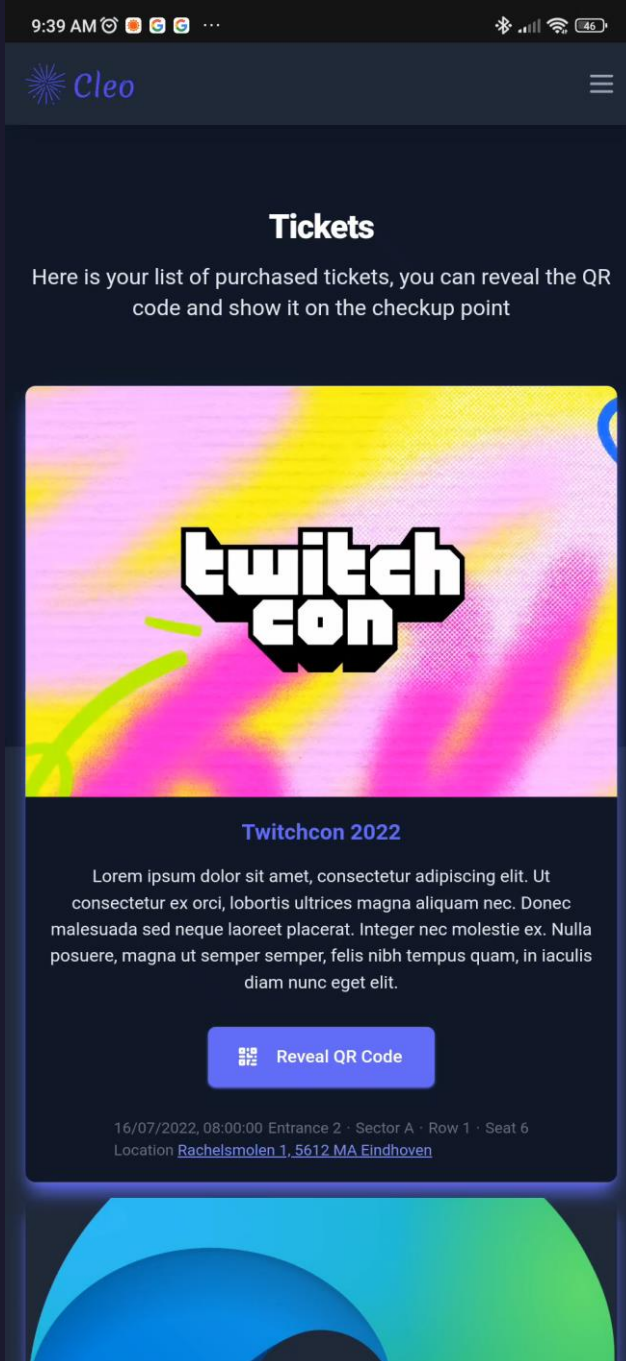

Introduction

- Cleo app is an event management system. It offers a one in all solution for managing a particular event

Customer view

The demo will show how a customer can buy a ticket from the Event shop and they can reveal the QR code.

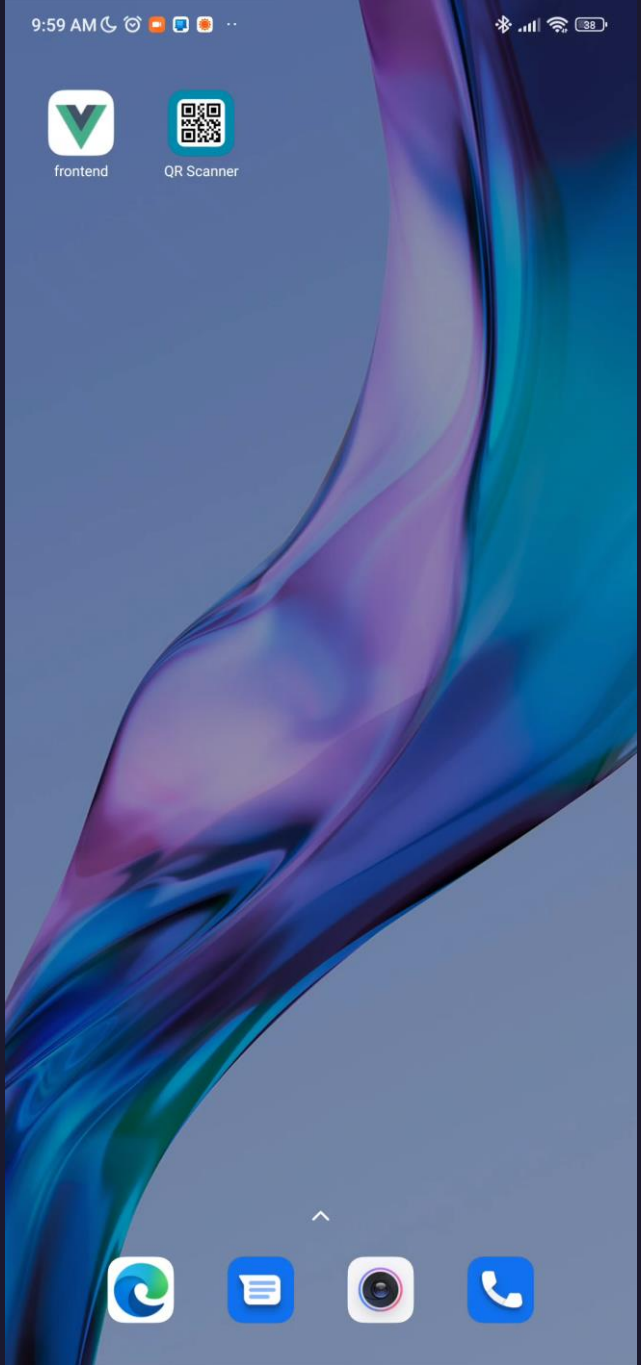

Note there is an option for a physical ticket, but it not demonstrated here.

Checkup view

The demo shows two ways how to scan the tickets

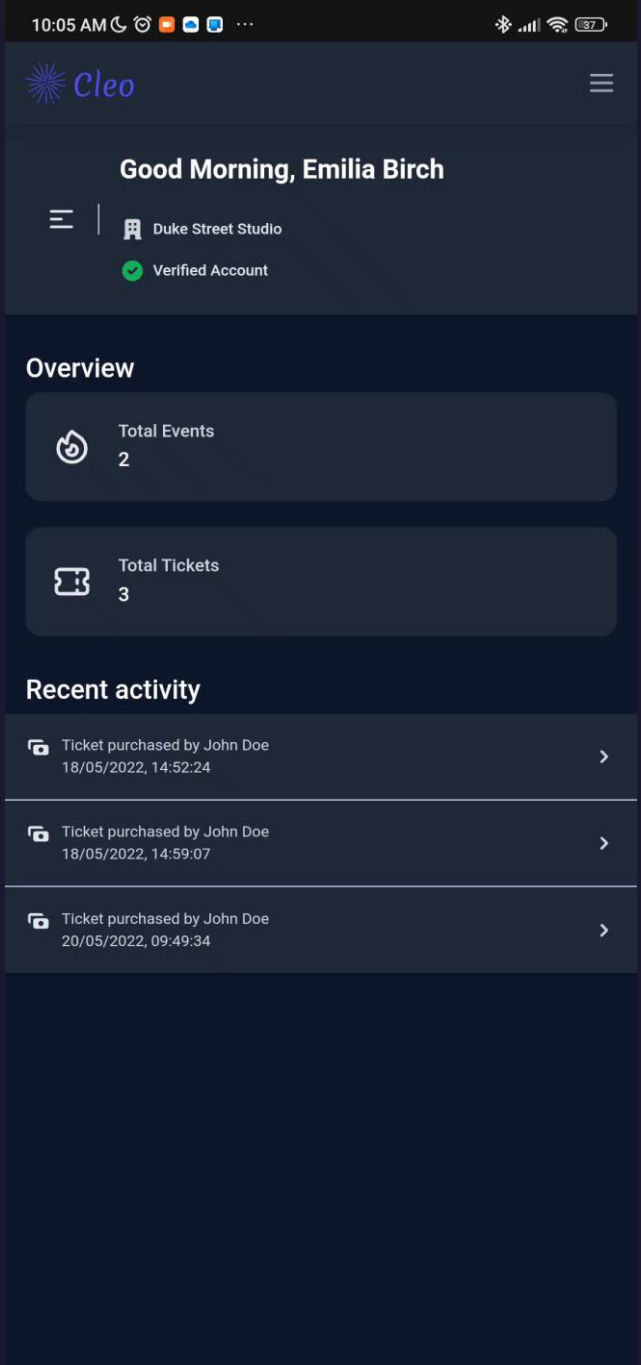

Note: The manifest uri handling is broken atm. As well as the NFC is in early alpha, so it is working slightly off (it may not work on some devices)

Partner view

The demo will show how you create an event, your overview and your event list

Note that one of the events is missing inside the event shop! That is because the event has passed. The error for the create event is a bug, as you can see it is working.

Thank You
